

THE 4×6 BAG LABEL

Actual layout, actual barcode — this is a real, scannable Code 128 for **BAG-000123**, generated by the same code the Print Labels page uses. The label is a 4" × 2" sticker, sized to sit across the top of a 4×6 bag without covering the cards.

BAG LABEL — 4" × 2"

4.0" WIDE × 2.0" TALL · SHOWN ~FULL SIZE ON A DESKTOP SCREEN

BOX LABEL — 6" × 4" JUMBO (PRINTED IN PAIRS)

6.0" WIDE × 4.0" TALL · BARS SIZED TO SCAN FROM 4-6 FEET WITH A STANDARD 2D IMAGER · TWO COPIES PRINT PER BOX: BASE + LID, SAME CORNER

ON THE BAG

Label at the top, cards visible below.

The gun reads it flat in a box row without pulling the bag out.

Box labels are identical — same 4×2 layout, same Max Collection brand, chip says **BOX**, code reads **BOX-000042**. One design to recognize, two chips to tell apart.

Divider cards use the same layout with a **DIV** chip, plus the optional name line when you print one.

WHY EACH ELEMENT IS THERE

MAX COLLECTION — required

Instantly identifies whose bag/box this is, anywhere it ends up.

Type chip (BAG / BOX / DIV)

A glance sorts label types before anything is scanned — no reading the code needed.

Tall Code 128 barcode

~0.7" of bar height scans first-pass from a gun at desk distance, even at an angle.

Giant human-readable code

If a barcode ever gets scuffed, the code types in from across the desk. Zero-padded, mono, no ambiguous characters.
